SUMMARY

Frontend developer at Mintifi, a lending fintech in Mumbai, with 1 year 5 months of experience on web and mobile. Works on the Customer App (50K+ active customers) in React and Next.js and developed its React Native version from scratch, live since March 2026.

SKILLS

Frontend: TypeScript, JavaScript (ES6+), React.js, Next.js, HTML5, CSS3, Tailwind CSS, Responsive Design, Framer Motion
Mobile: React Native, Expo, React Navigation
State and Data: Redux Toolkit, TanStack Query, REST APIs
Payments and Security: Razorpay, Paytm, PayU, JWT, TOTP, Role-Based Access Control (RBAC)
Backend and Databases: Node.js, Express.js, MongoDB, MySQL
Tools and Testing: Jest, React Testing Library, Playwright, Git, GitHub, Postman, Figma

WORK EXPERIENCE

Software Engineer (Junior) - Frontend & React Native
Mintifi, Mumbai | June 2025 - Present

Customer App (Web + Mobile)

- Engineered the entire frontend of the React Native (Expo, React Navigation) app from scratch, covering onboarding, loan and repayment flows. Kept app state in Redux Toolkit and server data in TanStack Query, reusing the web app's REST APIs plus new ones from the backend team. Released on the app stores in March 2026, it now has nearly 25K mobile users.
- Implemented fingerprint login, a dark mode that follows the phone's setting, a Rate Us prompt, and a birthday screen that wishes each user on the day.
- Designed screen-level error boundaries, so an API failure or slow network only affects the screen where it happens, and the app has had no crashes since launch. The error screen offers two options: email support (subject and body drafted by AI, screenshot attached only if the user agrees) or raise a ticket.
- Validated the app on real devices, wrote Jest and React Testing Library tests for mobile screens, debugged Android and iOS native issues, and tracked crashes with a monitoring tool.
- Integrated Paytm and PayU for loan repayments on web and mobile.

Transaction Portal (Legacy Modernization)

- Migrated a legacy React 15 transaction portal to Next.js and TypeScript. Pages and charts load much faster, and the business workflows work exactly as before.
- Established Redux Toolkit for app state and TanStack Query for server state, and connected the REST APIs.
- Reduced dashboard page load time by 30% (measured in the browser Network tab) with render optimization, code splitting and lazy loading. Lighthouse scores (Performance, Accessibility, Best Practices, SEO) went from 70/74/56/45 to 91/96/100/100.
- Developed 4 loan-offer modules where the finance team can change eligibility rules without a code deployment.

AHS App

- Launched QR-based invoice scanning and TOTP two-factor login, cutting manual data-entry errors by about 40%.
- Restructured Customer 360 into an auditable listing with activation and deactivation controls and role-based access control (RBAC).
- Delivered a General and Life Insurance module for in-journey sales, with premium capture and Loan Management System charge integration.

PROJECTS

Imagify - AI Image-Generation SaaS | MERN, JWT, Razorpay | Team Lead

- Led development of a credit-based AI image-generation SaaS on the MERN stack as team leader, owning technical decisions, task planning and delivery.
- Built JWT authentication, role-based access control, an admin dashboard for usage analytics and log management, and a Razorpay payment flow from order creation to webhook confirmation.

EDUCATION

B.Tech in Information Technology
Bankura Unnayani Institute of Engineering | Aug 2022 - Jun 2025 | CGPA 8.29/10

COMPETITIVE PROGRAMMING

LeetCode: RahulScripted - 388 problems, rating 1709 (peak 1712)
CodeChef: explosion_king - 3-Star (peak 1689)
